

# Patrick Selamy

New York, NY | (646) 847-9838 | [pselamy@gmail.com](mailto:pselamy@gmail.com) | [selamy.dev](http://selamy.dev) | [linkedin.com/in/patrickselamy](https://linkedin.com/in/patrickselamy) | [github.com/pselamy](https://github.com/pselamy)  
*Forward Deployed Engineer / Applied AI, Agents, and MCP Tooling*

## Summary

---

Software engineer who builds and ships production AI agent systems in the field: MCP-style tools, sub-agents, autonomous coding loops, and evals. Former Meta and Google engineer who built one of the first Gemini-based software-engineering agents at Google Cloud's Office of the CTO, with SWE-bench eval harnesses and planning-versus-execution metrics that guided funding and staffing. Runs a live fleet of six always-on agents that does real work across repos, CI, scheduling, messaging, and credentialed tools under explicit security and reliability constraints.

## Selected Systems Portfolio

---

### *Agent Skills, MCP & Tooling*

- Agent-architecture framework where MCP servers expose callable capabilities and skills encode reusable judgment and procedures, including a skill for choosing MCP vs skills.
- Public and internal skills/MCP authoring workflows with privacy scanning, security-audit gates, and broker-held credentials; agents build their own MCP servers and contribute skills back.

### *Autonomous Agent Harnesses & Loops*

- Self-healing orchestrator coordinating six always-on agents through a SQLite priority queue, with multi-consumer leases, parallel workers, and dispatch/fan-out for team parallelism; tens of thousands of tasks executed over months of continuous operation.
- Watchdog that detects parked, stalled, and idle-while-work-pending agents and recovers them or enforces continued execution; reliable inter-agent messaging and resolve-or-decompose loops.
- Agents doing real work: credentialed document retrieval and prep, risk-capped live-capital market-making, CI repair, repo changes, and long-running task decomposition.

### *Fleet, Observability, Security & Production Rigor*

- Modeled each agent as a reusable Terraform module (identity, runtime, skills, schedule, secrets), so adding or reconfiguring an agent is a declarative change rather than a bespoke rebuild.
- Fleet instrumented with OpenTelemetry (traces, metrics, logs) including agent tool-call, token, latency, and trajectory telemetry, with a live dashboard.
- Built [Speedforge](#), a self-hosted GitHub Actions CI-runner product (Actions Runner Controller on spot VMs) with multi-substrate testing and cost and reliability work.
- Built a production multi-agent fleet on [Nous Research's open-source Hermes](#), choosing compose-over-fork so upstream improvements arrive via version bumps rather than fork maintenance.
- Per-agent OS-user and namespace isolation; GitOps and IaC with OpenTofu and Argo CD; runtime controls via flagd/OpenFeature; keyless secrets-broker custody with PAKE.

## Experience

---

**Meta**, Software Engineer

New York, NY | 2025 to 2026

- Expanded Facebook Marketplace third-party partner APIs and shipped-listing workflows for partner and seller-facing commerce.
- Shipped an ML-assisted listing flow that removed manual item-weight entry for shipped listings; predictions were evaluated against user-entered weights and carrier actuals, met the launch threshold near 80% accuracy, and lifted new-listing creation about 8%.

**Google**, Software Engineer

Pittsburgh / Austin / Remote / Atlanta | 2018 to 2025

- Worked across Google Shopping (Engineering Productivity), Google Play, Google Cloud Office of the CTO, and Internal Identity and Access Management.

- In the Office of the CTO, built early agentic-coding systems: a Gemini-based software-engineering agent, SWE-bench eval harnesses, and planning-vs-execution metrics that guided funding and staffing; benchmarked vector-search frameworks at scale (ScaNN, FAISS, pgvector) to position GCP's AI competitively.
- In Google Play (2024 to 2025), helped build [Play Games Leagues](#) from the ground up on a five-engineer team and designed a configurable fuzzer for third-party Play APIs.
- Built Insider Risk systems for internal security, enterprise identity, and trust-sensitive access.

**Earlier**, Backend / Platform / Healthcare Engineering Citi, Lumeris, ClearDATA, and others

- Built backend, platform, cloud, and healthcare systems in Python and Java across APIs, data workflows, and regulated environments.

## Selected Systems & Public Work

---

- [Public agent-skills](#): reusable agent procedures, authoring patterns, and an MCP-vs-skills framework.
- [framework-seed](#): an agent-orchestration and knowledge-management methodology.
- [Speedforge](#): self-hosted GitHub Actions CI runners.
- [polymarket-insider-tracker](#): a Python tool that flags suspicious wallet activity on Polymarket prediction markets.
- AI instructor and speaker: led an [Ayiti AI](#) bootcamp session on MCP, AI-assisted coding, and deployment, and [addressed lawmakers on AI policy](#) at the NHAEON National Leadership Summit.

## Technical Skills

---

|                                   |   |
|-----------------------------------|---|
| <b>Languages:</b>                 | Python, Java, Kotlin, JavaScript/TypeScript, Hack, PHP, Bash, SQL   |
| <b>AI / Agent Systems:</b>        | AI agents, skills/playbooks, MCP-style tools, tool calling, evals, agent harnesses, autonomous coding loops, context engineering, RAG, model routing, secure tool execution, state management |
| <b>Product &amp; Systems:</b>     | API design, backend platforms, distributed systems, workflow orchestration, product metrics, experimentation, launch analysis, developer infrastructure                                       |
| <b>Security &amp; Enterprise:</b> | internal IAM, auth boundaries, insider-risk systems, credential brokering, trust-sensitive workflows, privacy/security review gates   |
| <b>Infrastructure:</b>            | Kubernetes, OpenTofu/Terraform, Argo CD, Docker, Linux, GitHub Actions, Actions Runner Controller, CI/CD, observability, multi-cloud  |
| <b>Data &amp; Cloud:</b>          | PostgreSQL, Redis, Kafka, InfluxDB, Google Cloud, AWS   |
